Anhui University Semester 2, 2020-2021 Final Examination Numerical Analysis (Paper A)

Author: Donghui Pan

Ι	Single-choice	Questions	(3 marks for each question, 15	5 marks in total)
---	---------------	-----------	--------------------------------	-------------------

- **1.**Suppose that $f(x) \in C[a,b]$. If the range of y = f(x) satisfies $y \in [a,b]$ for all $x \in [a,b]$, then f(x) has _____ in [a,b].
- (A) a fixed point (B) no fixed point (C) a unique fixed point (D) a simple root
- **2.**The matrix $\begin{pmatrix} 4 & 1 & -1 \\ 1 & -5 & -1 \\ 2 & -1 & -6 \end{pmatrix}$ is _____.
- (A) a strictly diagonally dominant matrix; (B) not a strictly diagonally dominant matrix;
- (C) a singular matrix; (D) a matrix whose determinant is equal to 0.
- **3.**If $T_n(x)$ represents Чебышев (Chebyshev) Polynomials, then $T_n(x)$ is ______for $n=2,3,\cdots$.
- (A) $T_{n-1}(x) 2T_{n-2}(x)$ (B) $2xT_{n-1}(x) T_{n-2}(x)$ (C) $4xT_{n-1}(x) 2T_{n-2}(x)$ (D) $4xT_{n-1}(x) T_{n-2}(x)$
- **4.**Suppose that $\{(x_k, y_k)\}_{k=0}^n$ are n+1 points, where $a = x_0 < x_1 < \cdots < x_n = b$. If the endpoints constraints of a cubic spline are S''(a) = S''(b) = 0, then the cubic spline is _____.
- (A) clamped cubic spline (B) parabolically terminated spline
- (C) natural cubic spline (D) curvature-adjusted cubic spline
- **5.**Assume that [a,b] is subdivided into M subintervals with width $h=\frac{b-a}{M}$. If the composite trapezoidal rule is used to approximate the integral $\int_a^b f(x) dx$, then the error $E_T(f,h)$ is _____.

 (A) O(1) (B) O(h) (C) $O(h^2)$ (D) $O(h^3)$

II Fill-in-the-blanks Questions (3 marks for each question, 15 marks in total)

6.According to Gaussian elimination, the triangular factorization of the matrix $\begin{pmatrix} 1 & 1 & 6 \\ -1 & 2 & 9 \\ 1 & -2 & 3 \end{pmatrix}$ is ______

7. Assume that $L_{N,k}(x)$ is the Lagrange coefficient polynomial of degree N, and x_0, x_1, \dots, x_N is N+1 nodes, then for all $j=0,\dots,N,\sum_{k=0}^N L_{N,k}(x_j)=$ _____.

- **8.**If $f(x) = x^2 + 1$, then the divided difference f[1, 2, 3, 4] is ______.
- **9.**The recurrence relation of Бернштейн(Bernstein) polynomial $B_{i,N}(t)$ is ______.
- 10. The degree of precision for Simpson's rule is ______.

III Computation Problems (10 marks for each problem; keep the forth decimal place with truncation error)

- **11.**Consider the function $f(x) = xe^{-x}$.
- (a) Find the Newton-Raphson formula $p_k = g(p_{k-1})$; (b) If $p_0 = 0.4$, then find p_1, p_2, p_3, p_4 and $\lim_{k \to \inf} p_k$.
- 12.In the following linear equation system:

$$4x - y + z = 7$$
 $4x - 8y + z = -21$ $-2x + y - 5z = 15$

- (a) Starting with $P_0 = (1, 2, 2)$ and use Gauss-Seidel iteration to find P_1, P_2 ;
- (b)Prove this Gauss-Seidel iteration is convergent.
- **13.**Let $f(x) = \log_2(x)$, use quadratic Newton interpolation polynomial based on the nodes $x_0 = 1, x_1 = 2, x_2 = 4$ to approximate f(3).
- **15.**Use the three-point Gauss-Legendre rule to approximate $\int_{1}^{5} \frac{dt}{t}$ and compare the result with Simpson's rule S(f,h) with h=2.

IV Proof Problems (10 marks for each question, 20 marks in total)

16.Use Heun's method to solve the initial value problem $y' = \frac{t-y}{2}, t \in [0,3]$ with y(0) = 1, for the step size h = 1.

17. Suppose that [a,b] is subdivided into M subintervals $[x_k,x_{k+1}]$ of width $h=\frac{b-a}{M}$. The composite trapezoidal rule T(f,h) is an approximation to the integral

$$\int_{a}^{b} f(x)dx = T(f,h) + E(f,h).$$

If $f \in C^2[a,b]$, prove there exists a value $c \in (a,b)$ such that the error E(f,h) has the form

$$E(f,h) = -\frac{b-a}{12}f''(c)h^2 = O(h^2).$$
